FUND OVERVIEW

The Fund aims to achieve a positive absolute return through a combination of capital growth and income on your investment regardless of market conditions. The Fund seeks to gain at least 70% of any investment exposure to shares of companies incorporated or listed in the United States, Canada and Latin America. This is achieved by investing at least 70% of its assets in shares, other equity-related securities and, when determined appropriate fixed income (FI) securities (such as bonds), money market instruments (MMIs), deposits and cash. The equity-related securities include financial derivative instruments (FDIs). At any one time, a substantial, or even all of the Fund's assets may be held as cash to provide cover for the exposure created by the use of FDIs or to assist in achieving its investment objective.

RATINGS

Key Risks Continued: The fund invests a large portion of assets which are denominated in other currencies;hence changes in the relevant exchange rate will affect the value of the investment.The strategies utilised by the Fund involve the use of derivatives to facilitate certain investment management techniques including the establishment of both 'long' and 'synthetic short' positions and creation of market leverage for the purposes of increasing the economic exposure of a Fund beyond the value of its net assets. The use of derivatives in this manner may have the effect of increasing the overall risk profile of the Funds. Investors in this fund should understand that the Fund is not guaranteed to produce a positive return and as an absolute return product, performance may not move in line with general stock market trends as both positive and negative share movements affect the overall value of the fund. The Manager employs a risk management process to oversee and manage derivative exposure within the Fund. The Fund may be exposed to finance sector companies, as a service provider or as counterparty for financial contracts. Liquidity in the financial markets has been severely restricted, causing a number of firms to withdrawn from the market, or in some extreme cases, becoming insolvent. This may have an adverse affect on the activities of the fund.
